DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitations in claims 1, 6, and 7 specifically the one stating "provided for selecting from the reduced number of transport format combinations the transport format combination that contains the lowest number of transport blocks while the already assigned inactive transport channels are taken into account" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities: On page 5, the "access points 4", in line 9, is not disclose in Fig. 2.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims, 1, 6, and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It cannot be clearly determined whether each of the claims is in relation to a method claim or an apparatus claim. The limitation "provided for" in each of the claims indicates that it was previously provided for in one manner or another. Furthermore, the statement "provided for selecting from the reduced number of transport format combinations the transport format combination that contains the lowest number of transport blocks while the already assigned inactive

transport channels are taken into account” does not clearly explain explicitly and implicitly how the lowest number of transport blocks is selected while the already assigned inactive transport channels are taken into account. The “metes and bounds” of the claims therefore cannot be clearly identified.

Allowable Subject Matter

5. Claims 1, 6 and 7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,850,540 to Peisa et al. relates to the field of communications systems, and in particular, by way of example but not limitation, to scheduling packets of data/informational flows having differing priority levels in a communications system.

U.S. Patent No. 6,510,137 to Belaiche relates to a method and system for configuring a CDMA telecommunications system having at least one sending entity and at least one receiving entity, each entity configured to transmit data on at least one physical channel via a transport channel composite of multiple transport channels.

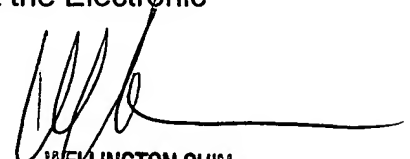

U.S. Patent No. 6,845,100 to Rinne relates to IP packets classified according to QoS which are mapped onto radio bearers according to various mechanisms.

The above prior art are cited to further show the state of the art with respect to a Medium Access Control (MAC) layer scheduling packet transmission of various data flows to meet stipulated criteria, including permitted transport format combinations (TFCs) from a TFC set (TFCS).
